M4Q Effects

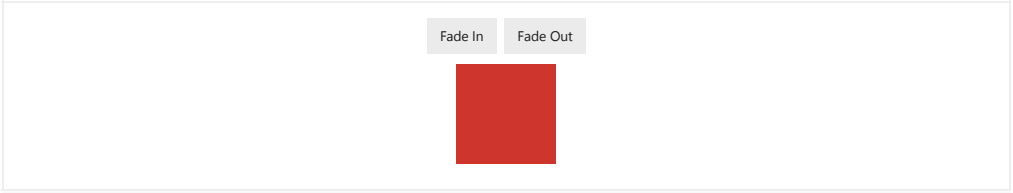
You can control element visibility with special effects functions.

About

You can control element visibility with special visibility functions: `fadeIn()`, `fadeOut()`, `slideIn()`, `slideOut()`.

Fade effect

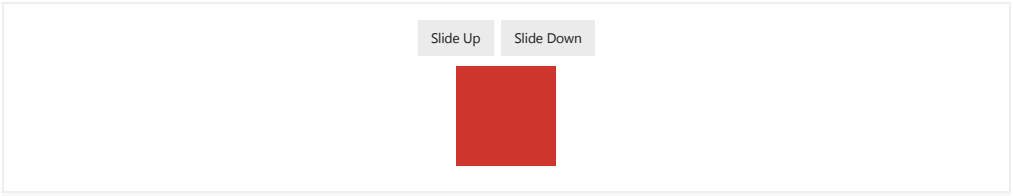
To toggle element `display` property with `fade` effect, you can use functions `fadeIn()` and `fadeOut()`.



```
<button class="button" onclick="$('#div-fade').fadeIn()">Fade In</button>
<button class="button" onclick="$('#div-fade').fadeOut()">Fade Out</button>
<div id="div-fade" class="demo-box bg-red"></div>
```

Slide effect

To toggle element `display` property with `slide` effect, you can use functions `slideDown()` and `slideUp()`.



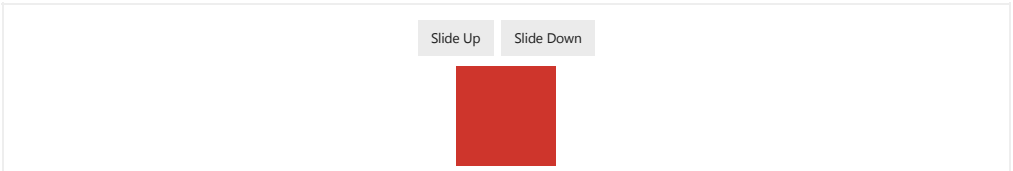
```
<button class="button" onclick="$('#div-slide').slideUp()">Slide Up</button>
<button class="button" onclick="$('#div-slide').slideDown()">Slide Down</button>
<div id="div-slide" class="demo-box bg-red"></div>
```

Function arguments

Each effect function may take the following arguments:

- **duration** - animation duration
- **easing** - easing function name
- **callback** - function was executed when animation finished

```
$(...).fadeIn(1000, 'linear', function(){
   console.log('Animation done');
})
```



```
<button class="button"
    onclick="$('#div-slide2').slideUp(1000, 'easeOutBounce')">Slide Up</button>
<button class="button"
    onclick="$('#div-slide2').slideDown(1000, 'easeOutBounce')">Slide Down</button>

<div id="div-slide2" class="demo-box bg-red"></div>
```
