Side navigation

Metro 4 contains components to create user-friendly side navigation.

About

Often the project needs to implement a side menu. Metro 4 gives you the opportunity to do this in many ways. You can use: **side menu**, **side menu with counter** or **side menu m3**.

Side menu simple

To create **side navigation** you must add class `.sidenav-simple` to list and create **items** in special formats. Each item must contains: `icon` and `title` elements.

By default, side menu displayed in compact mode. To expand it, you must add one of classes: `.sidenav-simple-expand-fs` , `.sidenav-simple-expand-sm` , `.sidenav-simple-expand-md` , `.sidenav-simple-expand-lg` , `.sidenav-simple-expand-xl` or `.sidenav-simple-expand-xxl` . More about media breakpoints you can see in [this article](#).

```
<ul class="sidenav-simple h-auto">
  <li><a href="#">
    <span class="mif-apps icon"></span>
    <span class="title">all items</span>
  </a></li>
  ...
</ul>
```

Side menu with counter

To create **side navigation with counter** you must add class `.sidenav-counter` to list and create **items** in special formats. Each item must contains: `icon` , `title` and `counter` elements.

By default, side menu displayed in compact mode. To expand it, you must add one of classes: `.sidenav-counter-expand-fs` , `.sidenav-counter-expand-sm` , `.sidenav-counter-expand-md` , `.sidenav-counter-expand-lg` , `.sidenav-counter-expand-xl` or `.sidenav-counter-expand-xxl` . More about media breakpoints you can see in [this article](#).

    <span class="title">all items</span>
    <span class="counter">0</span>
  </a></li>
  ...
</ul>
```

To set this menu for right to left language, add attribute `dir="rtl"` to list.
