# Containers

Containers are the most basic layout element in Metro 4.

## About

Containers are the most basic layout element in Metro 4. Choose from a responsive, fixed-width container (meaning its `max-width` changes at each breakpoint) or fluid-width (meaning it's `100%` wide all the time). While containers can be nested, most layouts do not require a nested container.

## Fluid container

Use `.container-fluid` for a full width container, spanning the entire width of the viewport.

```
<div class="container-fluid">  
  <!-- content here -->  
</div>
```

## Responsive container

Use `.container` when you need container with responsive feature.

```
<div class="container">  
  <!-- content here -->  
</div>
```

Responsive container use next rules:

```
container {width: 100%;}  
  
@media (min-width: 576px) {  
  .container {  
    max-width: 540px;  
  }  
}  
  
@media (min-width: 768px) {  
  .container {  
    max-width: 720px;  
  }  
}  
  
@media (min-width: 992px) {  
  .container {  
    max-width: 960px;  
  }  
}  
  
@media (min-width: 1200px) {  
  .container {  
    max-width: 1140px;  
  }  
}  
  
@media (min-width: 1452px) {  
  .container {  
    max-width: 1360px;  
  }  
}
```
