Calendar

Component library

metrO4

Calendar is a component for a user to select a specific date, list of dates or a range of dates.

Create calendar

The calendar component is designed to organize the user's choice of a date or a list of dates. To create `calendar` add `data-role="calendar"` attribute to element. You can create compact calendar with class `compact` .

Week start

Metro 4 `calendar` support two modes for `week start` :

- from `sunday` (default)
- from `monday`

To set `week start` use `data-week-start` attribute. When value is `0` (default), calendar started from sunday, when value is `1` , calendar started from monday.

```
<div data-role="calendar" data-week-start="0"></div>  
<div data-role="calendar" data-week-start="1"></div>
```

Selection

You can use two variants of date selecting: `one date` mode (default) or `multi dates` mode. To set `selection` mode use attribute `data-multi-select` with values `true` or `false`.

If you set `data-multi-select="true"`, you also select `column` of dates by click on `week day`.

Cancel Today Clear Done

```
<div data-role="calendar" data-multi-select="true"></div>  
<div data-role="calendar" data-multi-select="false"></div>
```

Picker mode

You can set calendar to `picker mode` with attribute `data-picker-mode="true"`. In this mode user can select only one date and selected date marked as `today`.

2019
Thursday, Dec 19

< December > < 2019 >

Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31	1	2	3	4

Cancel Today Clear Done

```
<div data-role="calendar" data-picker-mode="true"></div>
```

Buttons

Metro 4 calendar contains predefined four buttons to behavior with component: `cancel`, `today`, `clear` and `done`.

To define buttons use `data-buttons` attribute with string value with enumeration of buttons. By default all buttons are present. If this attribute value is a `false`, all buttons will be hide.

2019
Thursday, Dec 19

< December > < 2019 >

Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31	1	2	3	4

Today Clear

2019
Thursday, Dec 19

< December > < 2019 >

Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31	1	2	3	4

```
<div data-role="calendar" data-buttons="today, clear"></div>  
<div data-role="calendar" data-buttons="false"></div>
```

For all buttons defined callbacks:

Button	Event	Data-*
--------	-------	--------

cancel	onCancel(el)	data-on-cancel
today	onToday(today, el)	data-on-today
clear	onClear(el)	data-on-clear
done	onDone(selection, el)	data-on-done

Buttons `today` and `clear` has specific predefined functions. Button `today` - set today for calendar. Button `clear` - clear selection for calendar. Callbacks for this buttons **executed after predefined functions**.

Input dates format

New in 4.2.20

You can define your input format for dates with attribute `data-input-format`. To define date parts use next identifiers:

day	<code>dd</code> , <code>%d</code>
month	<code>mm</code> , <code>%m</code>
year	<code>yyyy</code> , <code>yy</code> , <code>%Y</code>
hours	<code>hh</code> , <code>%h</code>
minutes	<code>ii</code> , <code>%i</code>
seconds	<code>ss</code> , <code>%s</code>

Example: if you input date is `21/12/1972`, you must define format as `%d/%m/%Y` or `dd/mm/yyyy` for valid convert string value to date.

If your input date format different from ECMAScript date format, you must define input format for these dates with attribute `data-input-format="..."`.

Exclude dates

You can exclude any dates from user selection. To exclude dates add `data-exclude="..."` attribute and specify comma separated dates who can be excluded.

ВідмінаСьогодніОчиститиГотово

<div data-role="calendar" data-locale="de-DE"></div>
<div data-role="calendar" data-locale="uk-UA"></div>

You can change locale in runtime. To change locale, update value for attribute `data-locale` .

```
<div class="d-flex flex-justify-center mb-4">
  <button class="button m-1" onclick="$('#cal_locale').attr('data-locale', $(this).text())">en-US</button>
  <button class="button m-1" onclick="$('#cal_locale').attr('data-locale', $(this).text())">de-DE</button>
  <button class="button m-1" onclick="$('#cal_locale').attr('data-locale', $(this).text())">hu-HU</button>
  <button class="button m-1" onclick="$('#cal_locale').attr('data-locale', $(this).text())">uk-UA</button>
  <button class="button m-1" onclick="$('#cal_locale').attr('data-locale', $(this).text())">ru-RU</button>
</div>

<div data-role="calendar" data-locale="en-US" class="mx-auto" id="cal_locale"></div>
```

Options

You can use calendar options to setup it behavior.

Option	Data-*	Default	Desc
yearsBefore	data-years-before	100	Years before today
yearsAfter	data-years-after	100	Years after today
show	data-show	null	Show specific date
pickerMode	data-picker-mode	false	Set calendar to picker mode
locale	data-locale	METRO_LOCALE (default en-US)	Calendar language
weekStart	data-week-start	0	Start month from sunday or monday (0 - sunday, 1 - monday)
outside	data-outside	true	Show dates outside from month (prev or next month dates)
buttons	data-buttons	cancel, today, clear, done	Buttons can be showing in calendar
ripple	data-ripple	false	Add ripple effect to click
rippleColor	data-ripple-color	#cccccc	Ripple color
exclude	data-exclude	null	Dates can be excluded from selection
preset	data-preset	null	Dates can be preselect
minDate	data-min-date	null	Min date
maxDate	data-max-date	null	Max date
weekDayClick	data-week-day-click	false	If true, user can click on week day to select column of days, required multiSelect can be set to true
multiSelect	data-week-day-click	false	If true, user can select a few days
showHeader	data-show-header	true	If true, header is visible
showFooter	data-show-footer	true	If true, footer is visible

Events

When calendar works, it generated the numbers of events. You can use callback for this event to behavior with calendar or eny elements. Rules for working with events are described on [this page](#).

Event	Data-*	Default	Desc
onCancel (el)	data-on-cancel	Metro.noop	Callback for cancel button
onToday (today, el)	data-on-today	Metro.noop	Callback for today button
onClear (el)	data-on-clear	Metro.noop	Callback for clear button
onDone (sel, el)	data-on-done	Metro.noop	Callback for done button
onDayClick (sel, day, el)	data-on-day-click	Metro.noop	Callback for day click
onWeekDayClick (sel, day, el)	data-on-week-day-click	Metro.noop	Callback for week day click
onMonthChange (curr, el)	data-on-month-change	Metro.noop	Callback for month change event
onYearChange (curr, el)	data-on-year-change	Metro.noop	Callback for year change event
onCalendarCreate (el)	data-on-calendar-create	Metro.noop	Callback fired when calendar is created

Event	Data-*	Default	Desc

```
<div data-role="calendar" data-on-day-click="console.log(arguments)"></div>

<div data-role="calendar" data-on-day-click="myFunction"></div>

<script>
  function myFunction(sel, day, el){
    console.log(sel)
    console.log(day)
    console.log(el)
  }
</script>
```

Methods

You can use calendar methods to interact with the calendar.

- **getPreset()**
- **getSelected()**
- **getExcluded()**
- **getToday()**
- **getCurrent()**
- **setToday(today)**
- **setExclude(exclude)**
- **setPreset(preset)**
- **setShow(show)**
- **setMinDate(date)**
- **setMaxDate(date)**

```
var calendar = $(element).data('calendar');

console.log(calendar.getPreset());
console.log(calendar.getSelected());
console.log(calendar.getExcluded());
console.log(calendar.getToday());
console.log(calendar.getCurrent());

calendar.setExcluded("10/10/2017, 10/11/2017");
calendar.setPreset("10/14/2017, 10/15/2017, 10/16/2017");
calendar.setShow("01/01/2017");
calendar.setMinDate("05/01/2017");
calendar.setMaxDate("31/01/2017");
```

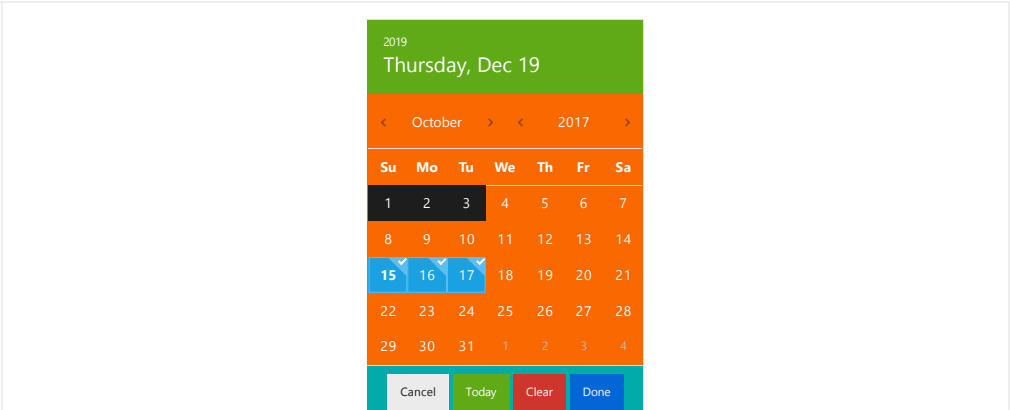

Observe

You can change attributes `data-exclude` , `data-preset` , `data-show` , `data-min-date` , `data-max-date` at runtime and calendar will be updated.

Customize

You can customize any calendar elements with nex options:

clsToday	<code>data-cls-today</code>	Additional class for today
clsSelected	<code>data-cls-selected</code>	Additional class for selected
clsExclude	<code>data-cls-exclude</code>	Additional class for excluded
clsCancelButton	<code>data-cls-cancel-button</code>	Additional class for cancel button
clsTodayButton	<code>data-cls-today-button</code>	Additional class for today button
clsClearButton	<code>data-cls-clear-button</code>	Additional class for clear button
clsDoneButton	<code>data-cls-done-button</code>	Additional class for done button
clsCalendar	<code>data-cls-calendar</code>	Additional class calendar
clsCalendarHeader	<code>data-cls-calendar-header</code>	Additional class for calendar header
clsCalendarContent	<code>data-cls-calendar-content</code>	Additional class for calendar content
clsCalendarFooter	<code>data-cls-calendar-footer</code>	Additional class for calendar footer
clsCalendarMonths	<code>data-cls-calendar-months</code>	Additional class for calendar months
clsCalendarYears	<code>data-cls-calendar-years</code>	Additional class for calendar years

```
<div class="mx-auto"
  data-role="calendar"
  data-show="2017/10/15"
  data-exclude="2017/10/01, 2017/10/02, 2017/10/03"
  data-preset="2017/10/15, 2017/10/16, 2017/10/17"
  data-cls-selected="bg-cyan fg-white"
  data-cls-excluded="bg-dark fg-white"
  data-cls-today="bg-pink fg-white"
  data-cls-today-button="success"
  data-cls-clear-button="alert"
  data-cls-done-button="primary"
  data-cls-calendar-header="bg-green"
  data-cls-calendar-content="bg-orange fg-white"
  data-cls-calendar-footer="bg-teal"
></div>
```
