

Manage the display of the border using border utilities classes.

To create border add class `.border` to element. Default border `color` is `transparent`. To set border color you must use border color utilities `bd-*`, defined in `metro-colors.css` (details on [Color utilities](#))

Hide border

You can hide border on element. Add one of classes: `.border-none`, `.border-left-none`, `.border-right-none`, `.border-top-none`, `.border-bottom-none`.

Also you can set invisible border with class: `.border-visible-none`.

To set border size use special classes: `.border-size-*` where asterisk value from 1 to 10.

You can set `border-style` with special utilities classes: `.border-solid`, `.border-dashed`, `.border-dotted`, `.border-double`, `.border-groove`, `.border-inset`, `.border-outset`, `.border-ridge`.

Metro 4 contains utilities classes for change `border-radius` property.

- `.border-radius` - set border radius 0.25rem (default 4px)
- `.border-radius-half` - set border radius to 50%
- `.border-radius-1` to `.border-radius-10` - set border radius from 10% to 100%
