# Image compare

Create interactive image compare with Metro 4 component.

## About

To create `image-compare` , add attribute `data-role="imagecompare"` to your container and put into container two images.

```
<div class="image-compare" data-role="imagecompare">  
    
    
</div>
```

## Set size

You can change size of `image-compare` with attributes `data-width` and `data-height` . By default, these attributes have next values:  
`data-width="100%"` , `data-height="auto"` . You can use `integer` , `percent` or `aspect-ratio` values.

## Aspect-ratio value

To set component height, you can use special `aspect-ratio` values: `16/9` , `21/9` , `4/3` .

## Fixed size

To set fixed size, use integer values for attributes `data-width` and `data-height` .

```
<div class="image-compare" data-role="imagecompare" data-width="300" data-height="200">  
    
    
</div>
```

## Responsive container

If you need a response `image-compare` , set `data-width="100%"` and use special values for `data-height` attribute: `16/9` , `21/9` , `4/3` , `auto` (for auto used `16/9` value).

Touch and swipe

```
<div class="image-compare" data-role="imagecompare" data-height="16/9">  
    
    
</div>
```

## Events

You can create callback for component events: `data-on-resize` , `data-on-slider-move` and `data-on-image-compare-create` .
