Embeds

Create responsive video or slide-show embeds based on the width of the parent by creating an intrinsic ratio that scales on any device.

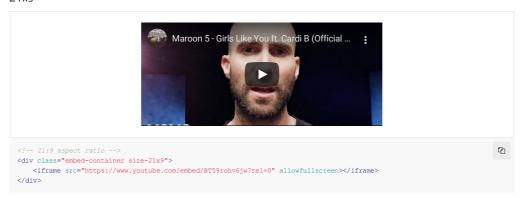

Rules are directly applied to $\langle \text{iframe} \rangle$, $\langle \text{embed} \rangle$, $\langle \text{video} \rangle$, and $\langle \text{object} \rangle$ elements. To use this feature add embedding element to container with class $\langle \text{embed-container} \rangle$. Default size is a $\langle \text{16x9} \rangle$ is a $\langle \text{16x9} \rangle$.

Aspect ratio

Aspect ratios can be customised with modifier classes. To change embeds size add one of size classes: .size-21x9, .size-16x9, .size-4x3, .size-1x1.

21x9

16x9

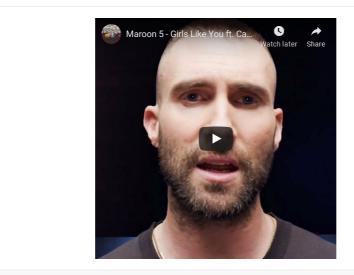

4x3

1x1 (square)
