Components API

About

Each components have an API to interact with it.

Access to API

To get access to components API, you must call method `Metro.getPlugin(...)`. This method receive two arguments: `element` (can be `selector`, `m4q object`, `jQuery object` or `HTMLElement`) and `component name`.

Init component

```
<div data-role="charms" id="left-charm">
    ...
</div>
```

or

```
<div id="left-charm">
    ...
</div>

Metro.makePlugin("#left-charm", charms, {});
```

Get API

```
var charm = Metro.getPlugin("#left-charm", "charms");
charm.open(); // API method
...
charm.open(); // API method
```
