# Post Card

Use builtin animation for your object to create post card animation.

About

To create `post-card` animation you must create container with class `post-card` and add two inner blocks with classes `.left` and `.right`. Also you must define size for `post-card` : `height` and `width`

```
<div class="post-card" style="height: 340px; width: 480px">
    <div class="left"></div>
    <div class="right"></div>
</div>
```

Flip the cards

Activation effect

To activation `post-card` effect, you must add one of two subclasses:

- `.effect-on-hover` - card rotated on user hover cursor on the card
- `.effect-on-active` - card rotated on toggle class `.active` on card

effect-on-hover

```
<div class="post-card effect-on-hover">
    <div class="left"></div>
    <div class="right"></div>
</div>
```

effect-on-active

```
<div class="post-card effect-on-active">
    <div class="left"></div>
    <div class="right"></div>
</div>
```

Left or Right

By default, card rotated to right side. To rotate card to left side, add subclass `.rotate-to-left` to card.

```
<div class="post-card effect-on-hover rotate-to-left">
    <div class="front"></div>
    <div class="back"></div>
</div>
```
