Color schemes

Create your own color scheme with a special mixin in just a few lines of code, just defining the main colors.

About

Metro 4 contains special `mixin` for simplicity creating color scheme. If you want to create your own color scheme:

Create less file in `less/schemes` folder

Define main colors and put them to the mixin

Build your one scheme

```
@import (once) "include/vars"; <-- Metro 4 variables
@import (once) "builder/builder"; <-- scheme builder mixin

@schemeBackground: ...;
@schemeBackgroundSecondary: ...;
@schemeTextColor: ...;
@schemeTextColorSecondary: ...;
@schemeControlColor: ...;
@schemeControlTextColor: ...;
@schemeFontFamily: ...;
@schemeFontSize: ...;

.scheme-builder(
    @schemeBackground,
    @schemeBackgroundSecondary,
    @schemeTextColor,
    @schemeTextColorSecondary,
    @schemeControlColor,
    @schemeControlTextColor,
    @schemeFontFamily,
    @schemeFontSize
);

... <-- put here additional styles for your color scheme
```

You can see prebuild schemes in this example.

Scheme example - sky-net.css

The sky-net.css source

```
@import (once) "../include/vars";
@import (once) "builder/builder";

@schemeBackground: #ffffff;
@schemeBackgroundSecondary: #f5f5f5;
@schemeTextColor: #464646;
@schemeTextColorSecondary: #464646;
@schemeControlColor: #0CA9F2;
@schemeControlTextColor: #ffffff;
@schemeFontFamily: @fontName;
@schemeFontSize: @fontSize;

.scheme-builder(
    @schemeBackground,
    @schemeBackgroundSecondary,
    @schemeTextColor,
    @schemeTextColorSecondary,
    @schemeControlColor,
    @schemeControlTextColor,
    @schemeFontFamily,
    @schemeFontSize
);

.navview {
    .navview-pane {
        .navview-menu {
            li {
                &.active {
                    &::before {
                        background-color: @white;
                    }
                }
            }
        }
    }
}
```
